

# Abdelghny Orogat (COMP3005A - Database Management Systems)

Instructor: Abdelghny Orogat  
COMP3005A - Database Management Systems

Comment #1:

Orogat has been one of the best instructors I've ever had for any course. He is incredibly organized and his communication has been by far the best out of any instructor I've ever had. Evaluation criteria are always very clear. Lectures are interesting and engaging. The professor is also very accommodating, providing a best 4-of-5 approach with assignments. In addition, he provides ample opportunity to gather bonus marks. He is just an outstanding instructor overall.

Comment #2:

Thank you for being passionate about the subject, clear about the course expectations, providing great explanations in the course content, and for being accommodating. I know a lot of students see and appreciate your efforts :)

Comment #3:

very open to feedback. thank you for the great semester!

Comment #4:

This is prof is a gem, he is SO NICE, explains everything in a GREAT and easily understood manner, he deserves to get paid for teaching 5 courses when he only teaches 1

Comment #5:

The professor was very open to hearing feedback from the students, and he is motivated to help students.

Comment #6:

This professor made this course amazing. Although the midterm was somewhat hard, he had the ability to listen to us students and take our feedback into consideration. He gave many opportunities to get bonus marks and his explanations during lectures were solid. The only thing that could be better is remembering to record lectures haha but regardless, out of all of the computer science professors I've ever had, this professor has to be the best one. If I were to give another piece of advice it would be to just please keep doing what you're doing. I hope you become a permanent prof since Carleton can really use professors like you.

Comment #7:

Very involved professor. Cares about his students and not only asks, but listens to our feedback and makes things suited to our needs. Thank you

Comment #8:

You are one of the best profs I've had at Carleton. You actively engage with students, and show that you really care about effectively communicating with us, our questions, and our wellbeing. I really like how seriously you take student feedback. I've never had a prof who actively reached out and asked for student feedback and then acted on that feedback as much as you have. It definitely

makes me as a student feel seen and heard. I also really like your slides. I was sick for a few

↑classes, and it was very easy to follow along and learn the course content through them. I like the difficulty of the tests and assignments too. It feels like it's right in the sweet spot where they're manageable if students listen to the lectures, but difficult if students try to study concepts at the last minute. There's not need to worry about setting aside hours and hours to study for a test, but I do still need to study for a few hours to refresh my memory.  
Thanks for a great class!

Comment #9:

He really goes above and beyond. You can tell he puts in so much effort into making the course engaging and interesting, not too easy but but too difficult. Would definitely recommend others to take his class

Comment #10:

Professor Orogat, you have no idea what you've meant to me this semester. You'll be getting a great big thank-you e-mail separately (whether or not you want it!), but in this little tiny text box, let me just say, from the bottom of my undergraduate heart: thank you!

Comment #11:

Professor Orogat is one of the best professors in the entire Computer Science department. He puts a lot of effort into his lectures, makes sure the slides contain pertinent information and explains them well during the lecture. He was very flexible throughout the semester; even though the course is in-person, he recorded the lectures as much as he could so that students could rewatch them if need be. The lectures were also engaging and his questions helped us think about the course material deeply. Furthermore, his assessments were fair. Although it felt like a lot of work at times, he was considerate enough to extend deadlines when most of the class did not feel ready. However, I thought the midterm was challenging enough for a third-year Computer Science course, and did not feel like there was a need to curve it, especially given the high average. Lastly, the final project was a great opportunity to apply our knowledge of DBMS and build an application from it. I would have loved to keep the initial requirements of creating a full-stack application but I also share the other students' sentiment that having 5 assignments, a project, and a final is a bit too much for a course. Overall, I enjoyed taking this course with him and wish him nothing but the very best for his career. Thank you for your kindness and for teaching us the fundamentals of DBMS!

Comment #12:

Best professor ever!!!!!!!!!!

Comment #13:

Thank you so much Professor Abdelghny, genuinely made the course very interactive and extremely understandable and concise from day 1 which really helped with memory retention and being able to understand every following lecture, reduced stress and would definitely take any upcoming courses you teach if i had the option to. Would also recommend any other students to take this course with you.

Comment #14:

Such a caring and dedicated professor. Don't lose that like all the other professors that are just

↑going through the motions of teaching without any regard to the students. I learned a lot in this class. The flexibility of recorded lectures was also amazing! Thank you

Comment #15:

Thank you professor for making this course interesting, the only problem is when you give students a specific grade in the final, you make them more worried and scared than ever. For example, right now my grades are between 80-100% I know I am passing but Im so scared I feel like Im failing the course because of this requirement.

Comment #16:

The prof was very understanding from student concerns. If students submitted feedback he would always make those changes to accommodate and announce to the class the new changes which were always warm and thankful.

Comment #17:

Thank you for being such a wonderful professor. You take student feedback and do your best to listen to us. You've been a pleasure to learn from.

Comment #18:

I want to express my deep gratitude for your exceptional role as our database professor. You are not only my favorite professor but also a key influencer in my educational journey. Your adaptability in response to student feedback, particularly regarding exams and course structure, is highly appreciated.

Your teaching style, which blends clarity with practical examples, makes complex database concepts accessible and engaging. This approach has significantly enhanced our understanding and interest in the subject.

The positive and supportive learning environment you create has been instrumental in our academic growth. Your commitment to our success is evident and truly valued. Thank you for your unwavering support and the profound impact you've had on our learning experience.
